New product introduction:

CAF-COMPO screw-stud now with M6-thread for no-corrosion on aluminum and steel

Press release, November 2019

The CAF-COMPO screw-stud is the only composite screw stud that blends in any design. Now introducing new M6-threaded versions that are suitable for installation on aluminum or steel, making a 100% corrosion free solution. No galvanic action on window profiles or other aluminum or steel surfaces. The stud is the lower part of a snap or press fastener system. Despite being about the smallest item on deck, it is recognized to be a true relief for boat builders and owners to have those studs 100% corrosion free and blended away in the colour of the surface.

About CAF-COMPO:

Yacht designers love to have the beautiful lines and shapes of their product not being disrupted by those inevitable points to hold cushions, blinds, carpets or covers down on deck. While it entails the exact same and quick installation as a normal screw stud. CAF-COMPO screw-stud is a composite self-tapping screw stud for use in fiber glass, wood and other composites. The stud is the lower part of a fastener system. Compatible fasteners are developed for products like: Tenax®, LOXX®, Minax and Li -the-DOT®-type products. It comes in a few white variants to match deck colour of yachts, light grey and black, or any custom colour you like. And finally, no issue with corrosion or wearing out. A version with a metric thread makes it possible to solve the corrosion issue on any aluminum surface, like window-frames.

CAF-COMPO for regular press fastener is introduced in fall 2017 and is granted Honorable Mentions for several industry awards (IBEX Innovation Award 2017, Special Mention DAME Award 2017, IFF Innovation Award and Winner IFAI Showstopper 2018).

Stand number at METS 2019: 12.106
